nVent CADDY Prefab Solutions

Our method, developed over a decade by a team of electricians, has proven to significantly reduce scrap and re-work costs while eliminating:

- Pre-construction costs
- Excess inventory of components
- Sourcing related issues of spot buying and partial shipments

OUR PROCESS

From start to finish, Prefab Solutions are efficiently manufactured and engineered to successfully be employed on any project type.

Review specifications for material type and electrical requirements

Identify potential interference points with other trades to provide an opportunity to avoid conflict

Involve experienced electricians to perform the engineering and layout of the system

Identify potential installation problems and forward a RFI

Schedule deliveries to coincide with project schedule

React to design changes throughout the project

Our solutions give contractors the ability to better control their labor cost, improve material management and meet the challenging schedule demands in today's construction environment. Prefab Solutions are developed by electricians for electricians. See our impact and learn the nVent CADDY difference below.

1 DIRECT LABOR SAVINGS

Solution is 90% complete when the system arrives. Delivery is direct to the job site, as product is needed. Products incorporate timesaving features, like the proprietary open back box, to ease installation.

2 EFFECTIVE USE OF SKILLED LABOR

Keep experienced staff where they belong: working on more technical tasks. Less experienced staff can simply mount the assemblies into place.

3 ELIMINATION OF SPOT BUYING

Everything is preassembled and shipped complete, eliminating lost or missing items during install.

4 ELIMINATE WIRE AND CABLE SCRAP

Material purchasing and tracking is reduced to one supplier, and product is released as the schedule requires.
